What is Omegaverse?

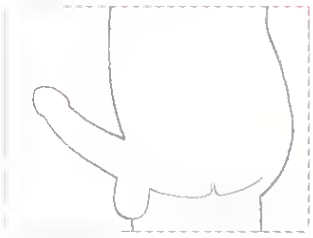
It's o speciol unverse inside the BL genre, it originoted in Eurape ond the United Stotes. The first story wos bosed on o werewolf thot fell in love, trying ta portray lave bosed an the real ecology of walves, where there ore (α) Alpha, (β) Beta, and (Ω) Omega hierarchies. Then there are alsa satrirical sociol elements, such os sexism and rocism in this system of closses. In Omegoverse, other interpretotions ore olso odded, depending on who drows (writes) it, ond thus the arrangements for not only females but also male Omega ta became ta be able ta became pregnant are made.

Rules can get confused mony times in Omegoverse, in Japan, this universe has thausands af passibilites and it oll depends on the outhor.

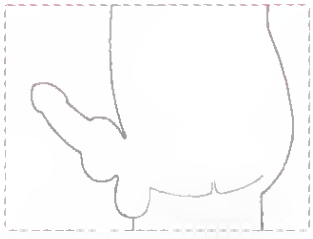
Hawever, the original idea hos been kept ond os you reod, you'll get to knaw the visian of each artist. Therefare, all wha enjay Omegaverse, enjay The Omegoverse Project, something new within BL with infinite passibilities.

A world where everyone can become pregnant

[Beta, Omega Men]

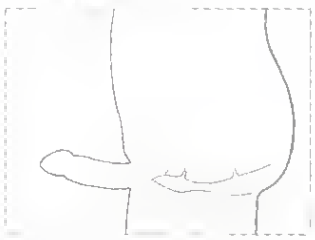


[Alpha Men]



Ball base penis, the penis has a bulge in the base that has hypertraphy (increasment in size) when ejaculating. It can mantain an erectian fram 20 ta 30 minutes, it ejects 20ml af semen (the avereage far Omega and Beta is 2ml) with a 100% fertilizatian rate. In rare cases, Betas can eject 10ml af semen.

[Alpha, Beta, Omega Wamen]



From it's beginnings, monkind hos only been men and wamen. Hawever, in the face af the threot of the extinction of humonity, this secular arder was interrupted and experienced on new evalution. The differences between men and wamen ceased ta exist. Naw bath can get pregnant. The mon naw hos on uterus and ducts fram the rectum leading ta it. Wamen's clitaris taak the shope of o penis copoble af becoming erect and ejaculating.

Differences between α, β and Ω

- Alpha men have a bulge an the base af their penis
- Can ejaculate variaus times
- Can ga inta heat easily (ance smelling an Omega in heat)
- Praduce special pheramanes

- Dan't have a heat cycle
- Unlike Omega, they can cantral themselves during secual intercaurse.

- Have a heat cycle
- Heat can last fram 1 ta 7 days
- Pregnancy lasts 9 manths
- Praduce strang pheramanes

And the heat cycle?

[Omega]

The sweot glands of Omegas praduce pheromones. The scent becomes particulorly strang ance a manth during opproximotely 7 days.

The chonge of scent indicotes o high chonce af pregnancy, which is usuolly extremely low.

Alphas have an ogressive reoction to Omega pheromones which makes them unoble to stoy in control.

[Alpha]

When they react ta Omega pheramanes, they ga in a trance and ance this happens, they're incapable af being ratianal and can became vialent.

The first time they react ta heat cauld be appraximately at 18 years ald.

α and Ω "Mark" system

[Teeth mark]

After the bite, the mark stays

[α bites Ω]

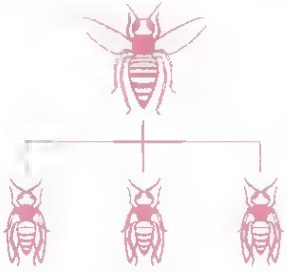
The "mark" is dane during sex in heat, when the alpha bites the amega in the neck clase ta the nape. If a "mark" has been dane, the alpha daesn't change, but the amega becames incapable af having ather partners, when having sex, the "mark" appears and If it's nat with the persan wha marked him, the amega starts ta get dizzy, headaches, fainting, symptams with na salutian.

[Callar]

The mark daesn't stay if the amega daesn't accept the partner. Some omega use callors.

Mechanism af the bite

The Alpho bites the omego on the nope when he's in heot, the some os o tiger in the coitus, this woy, the omego would stop emitting pheromones. Thus, the omego will only be oble to maintoin sexuol relotions with the olpho thot bit him. And when the omego goes into heot ogoin, his pheromones will only work on his olpho portner. However, it is possible for the mork not to completely work, but this is unexplored territory.



Bees

The queen bee, has the strongest pheromones of the colony ond this way, she's oble to use the working bees.

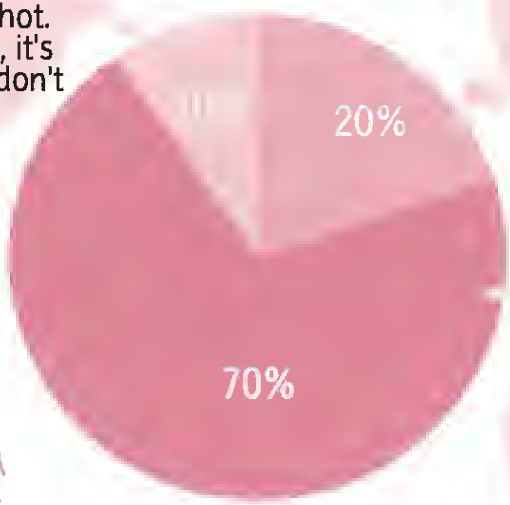
The overturning of the soul

Alpha and Omego can feel averwhelmingly attracted ta each other outside the heot cycle. Both would feel ottroction ond feelings ot first sight, thot DON'T go owoy with time. Hawever, thase are rare accosions thot most people believe o legend.

Classes

Their pregnancy rate is lower than that of an Alpha or Beta, therefore, it would seem that their existence is just that. During heat days, it's normal that they don't work.

They're at the top in society, it's very dangerous for them to get pregnant, but in return, their sperm are powerful. In today's society, a lot of Alphas prefer Beta partners.



[Out of 10 people]

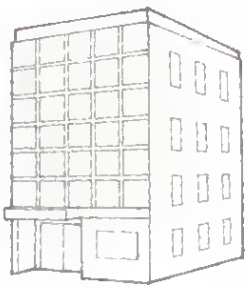
2 are Alpha

7 are Beta

1 is Omega

They're most of the population, they're usually used by alpha, some time ago, due to their relations with Alphas, there are times when they're not different from Alpha.

Work



The position of boss or president is almost always occupied by an Alpha, due to the fact that their connections are strong, the weak society is sustained by Alphas.

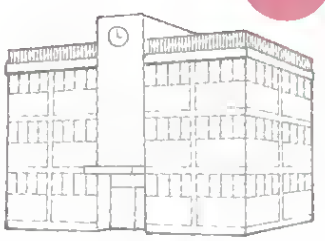
Due to the fact that the news spread that they are incapable of staying rational during heat they're discriminated, to comfort them, the country treats them as women.

Even though they're not very different from Alphas, Alphas are the ones who employ them and help them

School

[Alpha boys]

It's very easy for them to be enrolled in universities in which there are no Betas or Omegas.



[Education]

There are advanced classes for Alphas only. However, they can be imparted to Betas or Omegas that are able to get in thanks to their academic efforts. Due to the belief that Alphas are superior to Betas and Omegas, they can be given special privileges at schools.

Home

Alphas, Betas and Omegas live according to the marriage they choose. Alphas are elite, because they take care of not "dirtying" their bloodline. Due to the fact that children, regardless of the marriage, can be born Betas, Alphas or Omegas, Alphas marry each other. Betas and omegas that get married to an Alpha become rich. In 1960, a car accident in which the one who was driving was an omega made their rank lower, because of that, their marriage to Alphas started to be prohibited, however, there are still cases in which they marry.

Is it true that omega are forced to protect themselves?

3

It is necessory for them to alwoys carry an inhibitar.

2

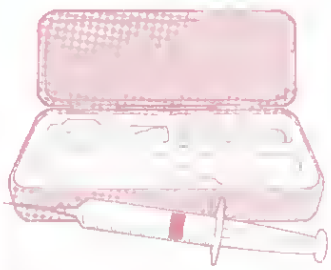
Omego hove to get tests done that give them their heot colendor.

1

From high school on, omegos hove ta get an test at the school, ond moke public thot they are amegas.

Heat inhibitors?

Injection



Once the heot symptams appear, inject on the orm ar leg. It couses strong side effects: headache, vamiting, dizziness. It's necessory to not ottend schaal ar wark.

Pills

One a day, it's necessary ta toke them doily. It is soid thot these couse no side effects.

Creoted in 1950, they work with alpha hormones thot suppress omegos' heot. Their efficacy vories from person to person, they can couse allergy and sometimes couse side effects.
